COPYRIGHT: (C)1999,JPO

(57) Abstract:

PROBLEM TO BE SOLVED: To provide the communication terminal equipment where the user of the communication terminal equipment informs document information without responding an incoming call through the use of an electronic document transmission service (electronic mail) by a caller number notice service and a network (Internet).

SOLUTION: Destination information is retrieved, based on a caller number- destination information cross reference table 106 in a memory A 105 from a caller number informed at the incoming of call and the retrieved destination information is stored in a destination information temporary storage area 107 in the memory A 105. Then dialing and service is connected automatically to a telephone number of a network service access point stored in an access point telephone number storage area 108 in the memory A105 after rejection of the incoming call or after interruption of a call incident by the incoming call and after the end of the connection, document information stored in a memory B 109 with destination information stored in the destination information temporary storage area 107 added thereto is transmitted.
